

COVID19 Risk Scoring Table (adapted from British Society for Rheumatology Risk Scoring Table) for patients with ocular inflammatory disease from high risk stratification letters to patients 30032020 (https://www.rheumatology.org.uk/Portals/0/Documents/COVID19_risk_scoring_guide.pdf?ver=2020-03-23-165634-597)

How do I calculate my risk score and which guidance should I follow?

- A list of immunosuppressant medications* and biologics** is printed below the risk factor calculation table
- Using each line of the table in turn, write your risk score in the 'my score' column.
- Add up your risk score total.

Risk factor	Score	My score
20mg or more prednisolone per day for more than four weeks	3	
5mg or more prednisolone per day, but less than 20mg per day, for more than four weeks	2	
Any cyclophosphamide within last six months	3	
ONE drug from list below of immunosuppressant medications* or biologics **	1	
TWO OR MORE drugs from the list below of immunosuppressant medications* or biologics **	2	
Any one or more of these: age over 70 years; diabetes; lung disease; kidney disease; heart disease or high blood pressure	1	
Intravitreal eye injections of steroid OR intravitreal steroid implants like Iluvien or Ozurdex	0	
	MY TOTAL SCORE =>	

* **Immunosuppressant medications:** azathioprine, leflunomide, methotrexate, mycophenolate (mycophenolate mofetil or mycophenolic acid), ciclosporin, cyclophosphamide, tacrolimus, sirolimus.

** **Biologics:** adalimumab (Humira and adalimumab biosimilars, including Amgevita, Hulio, Hyrimoz, Imraldi), infliximab, golimumab, certolizumab (and biosimilar versions of all of these); tocilizumab; abatacept; belimumab; anakinra; secukinumab; ixekizumab; ustekinumab; sarilumab; canakinumab; rituximab treatment within last 12 months.
